QuantumFlex Sovereign Research Dossier Service

Institutional Evidence Synthesis, Cross-Document Compliance Verification & Cryptographic Citation Provenance

---

1. Executive Summary

Regulated legal, M&A, real estate, and technical diligence teams routinely face multi-hundred-page document sets?municipal zoning codes, technical exhibits, regulatory dockets, and contract schedules?under tight transaction timelines. Public cloud AI tools introduce confidentiality exposure and unverified citation hallucinations.

The **QuantumFlex Sovereign Research Dossier Service** processes your confidential document corpus entirely on isolated, air-gapped local compute hardware (‘$0.00‘ public cloud data transmission) and delivers an executive-ready analytical dossier where **100% of factual claims are cryptographically bound to exact source document pages and SHA-256 content hashes**.

---

2. Core Service Guarantees

Assurance Pillar	Institutional Guarantee
100% Local & Confidential Processing	Zero documents, prompts, or excerpts ever leave dedicated local hardware. No third-party cloud LLM APIs are called.
Deterministic Citation Verification	Every analytical bullet cites its exact source document, chunk identifier, and page offset (‘[doc_id:p<page>]‘), verified against a SHA-256 content digest.
Tamper-Evident Corpus Merkle Root	Every delivered dossier includes a cryptographic admission receipt recording the SHA-256 Merkle root of the entire analyzed document set.
Automated PII & Credential Redaction	Pre-ingestion sanitization automatically scrubs accidental bearer tokens, private keys, or sensitive identifiers before indexing.

---

3. Standard Deliverables (Per Engagement)

1. **Executive Research Dossier (‘.pdf‘ & ‘.md‘):**
- Structured executive findings, regulatory posture analysis, cross-document anomaly detection, and risk/liability synthesis.
- Embedded **Deterministic Citation & Cryptographic Provenance Ledger** mapping every claim to its primary filing and page number.
2. **Machine-Readable Cryptographic Receipt (‘.json‘):**
- Records the dossier SHA-256 digest, PDF SHA-256 digest, corpus SHA-256 Merkle root, and citation verification metrics for independent auditability.
3. **Preserved Sanitized Corpus Snapshot:**
- Enables deterministic, bit-identical reconstruction of the dossier for regulatory or litigation verification.

---

4. Engagement Scope, Turnaround & Pricing

Engagement Tier	Corpus Volume	Turnaround SLA	Fixed Engagement Fee
Standard Diligence Dossier	Up to ‘500 pages‘ (‘~25 filings‘)	‘48?72 hours‘ (includes human analyst review)	**‘$2,500‘**
Comprehensive Transaction Dossier	‘500 ? 2,000 pages‘	‘3?5 business days‘	**‘$5,000‘**
Dedicated On-Premise Appliance	Unlimited internal runs	Turnkey local deployment + monthly assurance	**‘$2,500‘ setup + ‘$300/mo‘**

---

5. Engagement Workflow

1. **Scoped Intake:** Client provides target research questions and document corpus via encrypted archive or physical media.
2. **Isolated Local Indexing & Verification:** Corpus is sanitized, chunked, and verified on isolated hardware with zero external network egress.
3. **Human Quality Review & Delivery:** Every citation and finding undergoes final verification prior to delivery of the signed PDF dossier and cryptographic receipt.
